

- ✓ Fast grow-in
- ✓ Requires less fertilizer
- ✓ Uses less water
- ✓ High traffic tolerance

Aloha® Seashore Paspalum is a drought tolerant, warm season grass that requires up to 50% less water than Bermuda varieties. Aloha® can be irrigated with a wide range of water quality. Alternative water sources such as effluent, reclaimed or brackish may be used as an irrigation source. Weeds can be treated with table salt, and Aloha® has reduced nitrogen requirements – meaning less fertilization and less nitrogen run-off.

Aloha®'s intense green color and semi-dwarf leaf blade creates a tight knit, consistent playing surface that heals faster from wear than other paspalums tested.
